WORK EXPERIENCE

Full Stack Developer

Travelport / 2022 - Current

I work on the development of new functionalities, bug fixes, enhancements, and maintenance in Travelport Smartpoint Cloud. This web application aims to replace the existing software used by travel agencies, Galileo GDS. My notable contribution includes creating the graphical part of the booking file from scratch using a microservices and microfrontends architecture.

Front End Developer & UI/UX Designer

Mediamarkt / 2019 - 2022

My experience at MediaMarkt focused on website management and development, creating special pages and campaigns for leading market brands such as Apple, Samsung, Bosch, Xiaomi, among others. I was also responsible for creating forms for pages with partners like AXA, TotalEnergies, Movistar, and managing leads in the database.

Front End Developer & UI/UX Designer

Topdoctors / 2017- 2019

I had the responsibility of creating and developing landing pages, newsletters, and company products. Additionally, I was in charge of iconography design. I also worked on a project where we created customized pages for doctors, utilizing and programming in WordPress.
